## Azure ML Pipeline Test

---

# Azure ML Pipeline Test

## Purpose

Test deployment of Azure ML Pipeline and look at outputs and download trained model.

## Key Things Learned

1. When you create train.py and prep.py or any other environment files, they should be stored under ./src in your notebook directory.
2. You need to understand a bit of what you are trying to have it do as it can't think or make suppositions in a normal way. Garbage in, garbage out.

## Final Code
